## More information about certain modules

### config\_social\_media

This module provides the functionality to build links for the following social media sites in the footer area:

- Facebook
- Google Plus
- Twitter
- Xing

The links can be defined in the backend editor mode.

### content\_search\_results

The module performs a search and displays the search results.

#### Client settings:

Type	Name	Default value	Description
searchable	idcats	1	Define searchable category node

### content\_socialmedia\_facebook

This module provides the integration of the standard like button and the larger like box. The like box shows additional information about the people who already liked your site.

A further feature is the possibility to include public posts from a facebook site.

### content\_socialmedia\_googleplus

This module provides the Google Plus button in different sizes. In the backend editor mode you can choose if you want to rate for your Google Plus site or for the actual article.

### content\_socialmedia\_twitter

This module supports the twitter timeline. You can define the following settings in the backend editor mode:

- Timeline integration
- Light or dark style
- Color settings for a better style integration

### content\_userforum

The content\_userforum module can be used to allow comments of articles. The backend editor mode can be used to define the following settings:

- Moderator mode (new comments has to be set online by a moderator)
- Define the moderator email address for the notification about new comments
- Allow to cite comments

#### Client settings:

Type	Name	Default value	Description
userforum	mailfrom	<a href="mailto:info@contenido.org">info@contenido.org</a>	Default mailfrom address

## navigation\_searchform\_top

This module has to be set to the position in the layout where you want to enable search input from users. The module will redirect after the input to the search result page (specified at client settings).

### Client settings:

Type	Name	Default value	Description
navigation_searchform_top	search_result_idart	20	Article ID of search results page

## navigation\_bottom

This module can be used to generate a bottom navigation.

### Client settings:

Type	Name	Default value	Description
navigation_bottom	idcat	4	Define the root category for the bottom navigation

## navigation\_top

This module can be used to generate a top navigation.

### Client settings:

Type	Name	Default value	Description
navigation_top	depth	1	Define the category depth for the top navigation
navigation_top	idcat	39	Define the root category for the top navigation

## navigation\_main

This module can be used to generate a main navigation.

### Client settings:

Type	Name	Default value	Description
navigation_main	depth	3	Define the category depth for the main navigation
navigation_main	idcat	1	Define the root category for the main navigation

## form\_login

This module generates output of the frontend login/logout form.

### Client settings:

Type	Name	Default value	Description
login	idart	1	Define the redirect article after the login
