

# Testing Report CONTENIDO\_4.10.0 PHP7.0

## Fehler

- ✘ Wenn man CONTENIDO in Englisch installiert wird die UI im Backend dennoch in deutsch dargestellt.
- ✘ Vorlage für Kategorie "Blog" in deutsch soll "standard\_user\_forum" lauten. Anpassen in setup/data/examples/examples\_misc1.sql.
- ✘ Bei Neuinstallation soll Tiny4 ausgewählt sein: setup/templates/config.php.tpl
- ✘ Input Bereiche der Newsletter Module führen zu Fehlern
- ✘ con\_type.sql

## Verbesserung

- ✘ Wenn man in ein neues Verzeichnis eine Datei hochlädt, kann man das Verzeichnis dennoch löschen. Wird in der nächsten Version behoben.
- Passwort-Länge? bei Installation nicht definiert, aber im Backend werden mindestens 6 Zeichen vorausgesetzt.
- Nach einem neuen Artikel erstellen soll die Kategorienlegende automatisch ändern.
- Die Länge der Usergroupnames sollte 128 Zeichen betragen.

## New installation with example client

**With functions and data**

**only with functions and no data**

## New installation without example client

## General Tests

Please try to perform the following actions and check if they behave like expected for the backend and frontend

### Content -> Articles

Type	Backend	Frontend	Description
Create article	✓		
Set start article	✓		
Make article online	✓		
Change template	✓		
Freeze article	⚠ todo

Create client	✓	
Edit client	✓	
Create/Edit article specifications	✓	
Delete article specifications	✓	
Define default article specification	✓	
Save client setting	Zustand von Zeitsteuerung aktivieren	
Delete client setting	✓	
Edit client setting	✓	

Remove client	✓	
---------------	---	--

## Administration -> Logs

Type	Backend	Frontend
Show log		

## Administration -> Frontend

Type	Backend	Frontend
Create frontend user		
Save frontend user		
Add frontend user assignment		
Delete fronted user assignment		
Create frontend group		
Save frontend group		
Delete frontend group		
Delete frontend user		

## Administration -> Plugin Manager

Type	Backend	Frontend
Run Plugin Manager		
Install plugin		
Delete plugin		

## Content Types

All content types need to be tested. This requires them to be used in a module which is assigned to a template and edited in an article.

1. **CMS\_HTMLHEAD**
  - a. Input of HTML text should print HTML
2. **CMS\_HTML**
  - a. Input of HTML text should print HTML
  - b. Create a new link to another CONTENIDO article (Should set a correct path in TinyMCE)
  - c. Embed an image from the file manager
3. **CMS\_TEXT**
  - a. Input of HTML text should print HTML plain
  - b. Input of text with paragraphs should print text with line breaks
4. **CMS\_HEAD**
  - a. Input of HTML text should print HTML plain
  - b. Input of text with paragraphs should print text with line breaks
5. **CMS\_DATE**
  - a. Current date should be highlighted
  - b. "Now" should select the current date and time
  - c. Choosing a date and time should display the selected date with the right format in the input field.
  - d. Saving with the green check mark should print the formatted date in the article.
  - e. Changing the format should update the displayed date in the article.
6. **CMS\_TEASER**
  - a. Automatic:
    - i. Headlines with umlauts should print at the selected template place
    - ii. Change the sort order of the teaser
  - b. Manual teaser:
    - i. Select articles from different categories
  - c. Settings:
    - i. Change the display style of the teaser
    - ii. Image scale: "Cut" should display different sections
    - iii. Change the content types to display different content in the teaser

## 7. CMS\_FILELIST

- a. Directories:
  - i. Select more than one directory
- b. General
  - i. Try using headlines with umlauts
  - ii. Changing the sort order and sorting criteria
  - iii. Files from sub directories of the selected ones should be displayed if the checkbox is checked
  - iv. Meta data should be loaded and shortened if the checkbox is checked
- c. Filter:
  - i. Filter files with file extensions and file sizes
- d. Manual:
  - i. Select files to be included manually. Directories from the first tab should be ignored.

## 8. CMS\_IMG / CMS\_IMGDESCR / CMS\_IMGEDITOR

- a. Directories:
  - i. Selecting a directory should display images on the right
  - ii. Selecting sub directories should display images
- b. Meta:
  - i. Selecting a file should display its path and meta information
- c. Upload:
  - i. Create a new directory with new files. Selection should preview the image
  - ii. Upload new files in the main directory
  - iii. Upload new files in a sub directory
  - iv. Selecting an existing file should display a preview
- d. Save image with the green check mark. It should be displayed in the article

## 9. CMS\_LINK / CMS\_LINKTARGET / CMS\_LINKDESCR / CMS\_LINKEDITOR

- a. Checking "New window" should set LINKTARGET to display in a new window
- b. Changing the title should be reflected in LINKDESCR
- c. External:
  - i. External links should link to external websites
- d. Internal:
  - i. Internal links should be SEO optimized or contain a front\_content.php link
- e. Link to a file:
  - i. Create new directories with new files. Selecting should link to that file
  - ii. Upload new files to the main directory
  - iii. Upload new files to a sub directory
  - iv. Selecting an existing file should link to it Save content with green check mark

## 10. CMS\_PIFAFORM

## 11. CMS\_RAW

## 12. CMS\_USERFORUM
